

Home Access

VPN <http://it.umn.edu/downloads-guides>

Use the Download Guides to select your computer operating system.

Download and install the software.

Run the VPN software and log in

THEN

Map to a network drive (see next page if needed)

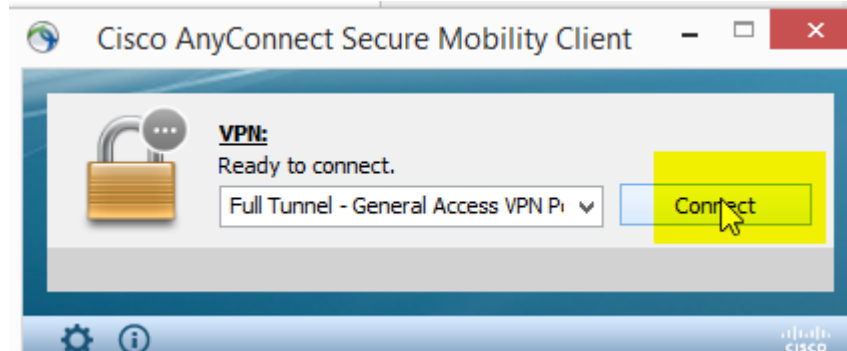

Use this “share name”

<\\files.umn.edu\cfans\labs>

This should give you access to the LAB network drive

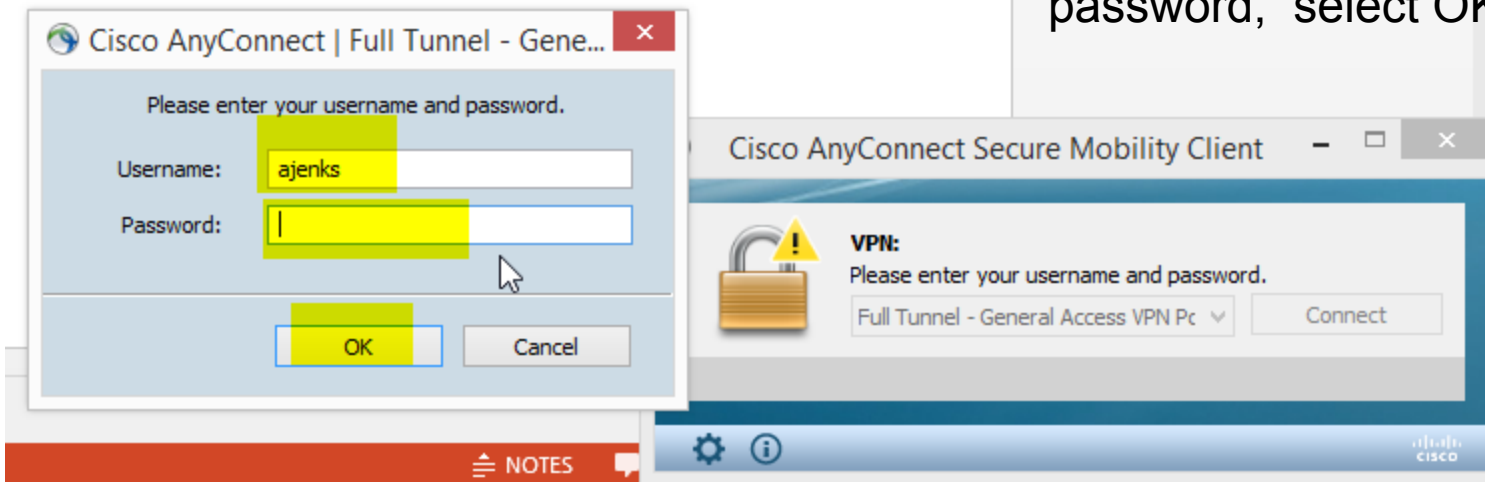

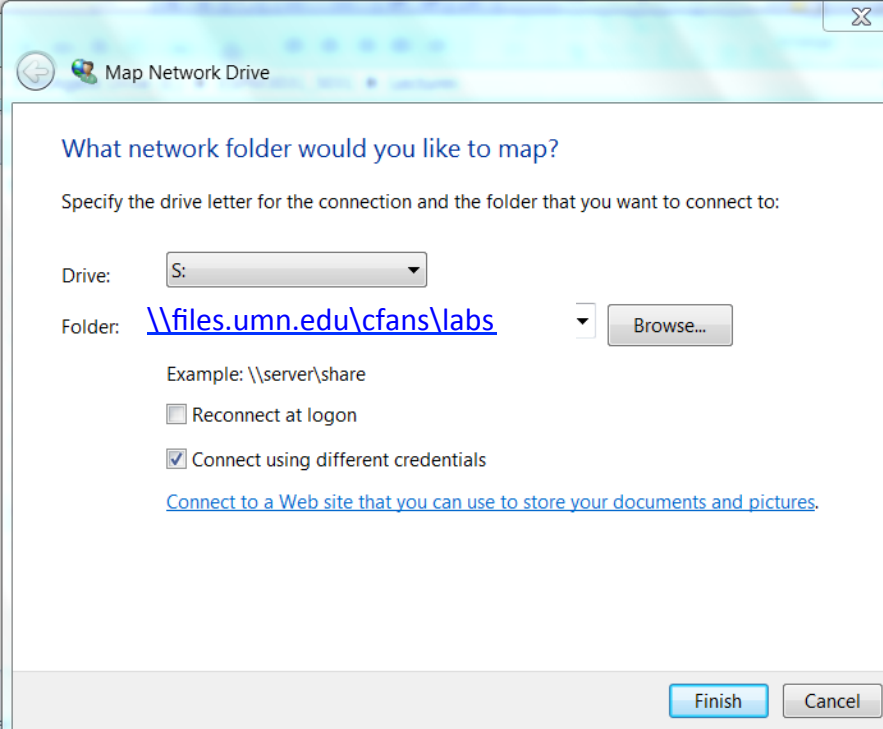

After the Anyconnect is installed find the little icon in the system tray and click on icon Opening AnyConnect

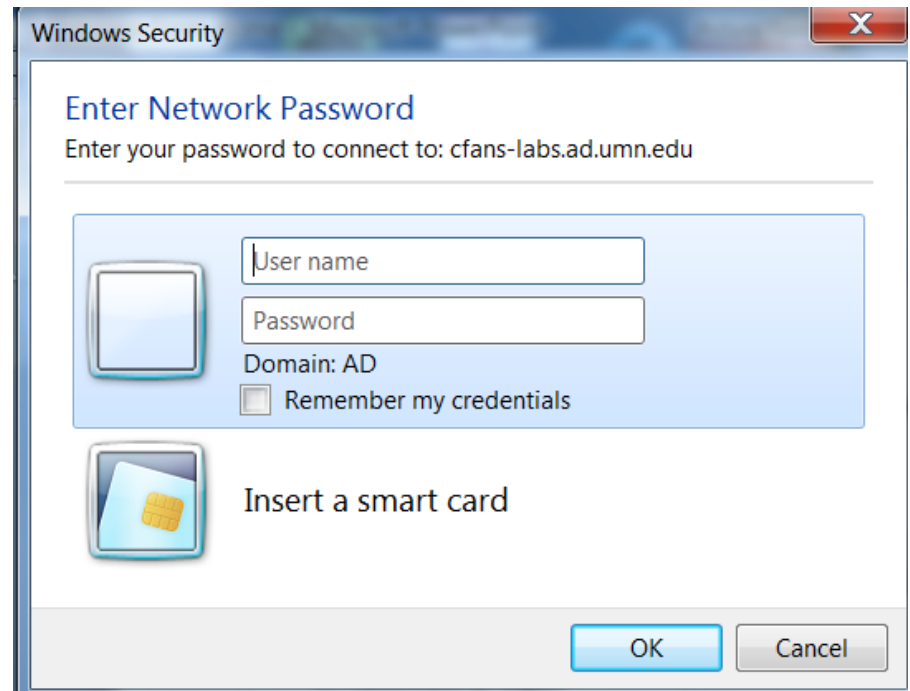

Then select Connect

Then fill in your UMN id and password, select OK

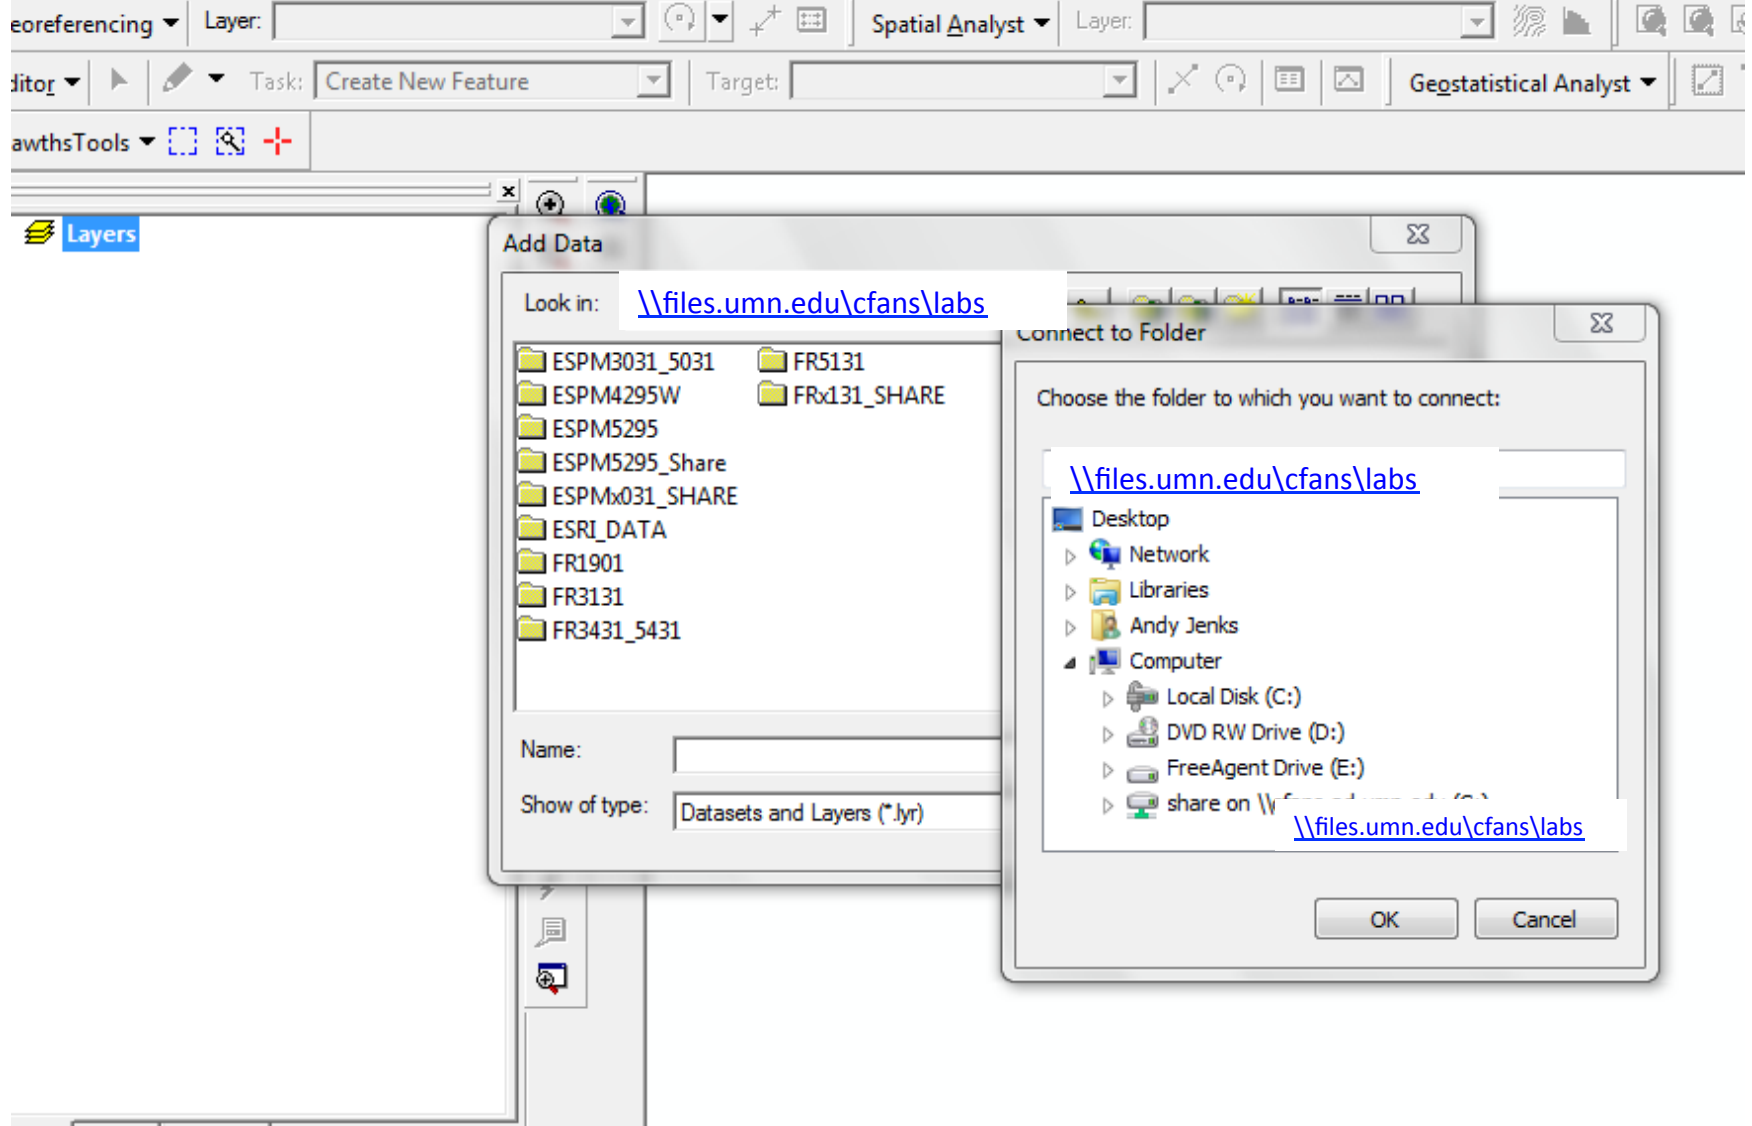

After installing the VPN software and establishing the VPN connection (logging in), then Use Windows Explorer to Map to a Network Drive (see above)

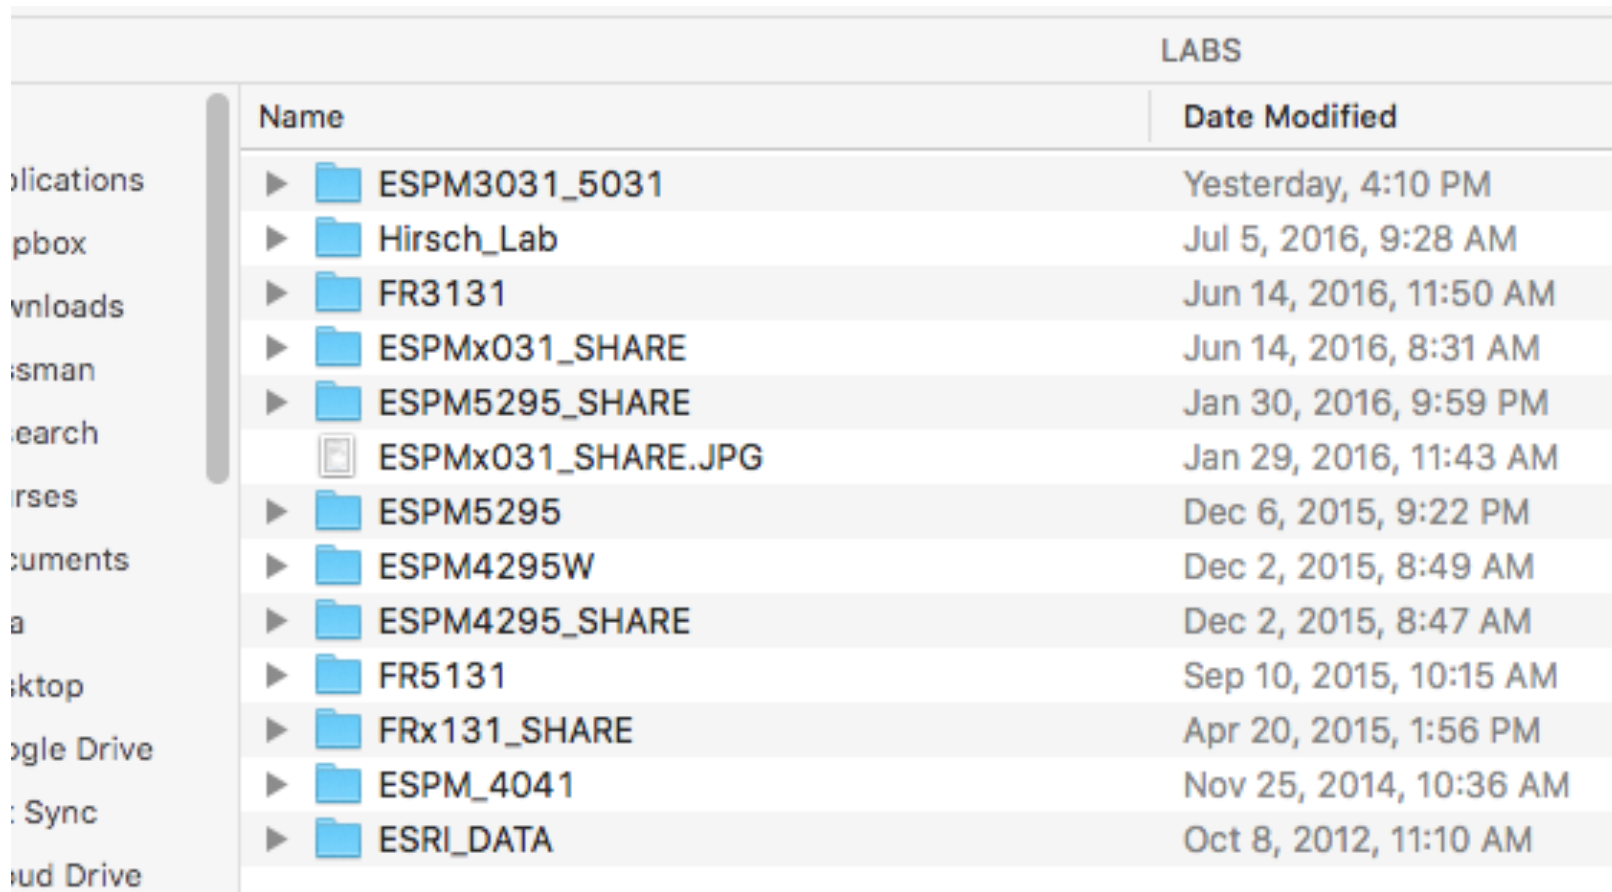

When prompted enter your username and password; Remember to use the format AD\username

You'll see something like this when accessing from an MS Windows computer (Mac on next page)

On a Mac you should see something like this when you look in Finder. If the drive doesn't show up, it may be because you don't have finder set up to automatically do that. Clicking on the all network connections  may help.
