

At 5:45 in this video Lab 1 Part 1 Overview:

Please DO NOT save to your L:\ or H:\ drive from ArcGIS Pro; always save to your working Lab directory on the Citrix Desktop.

After ArcGIS Pro is closed and BEFORE you leave Citrix (by logging out), copy your working Lab directory from the Citrix Desktop TO your H:\ (this is for safekeeping as Citrix clears your workspace when you log out of Citrix)

This video is correct except this minor error. Previously we used L:\ or H:\ directly in ArcGIS but have since found that L:\ or H:\ are just TOO slow to work reliably in ArcGIS Pro. ArcGIS Pro is very intolerant of disk access delays. When ArcGIS Pro encounters delays the software “hangs up” and does not function and work is lost.

Please avoid using L:\ or H:\ directly in ArcGIS Pro. Those drives are fine for storage but not for direct program use.
