

Quick Start- Install ArcGIS Pro on your own computer

1. Check the [minimum specification](#) for installation. You must have a fast, modern, 64 bit WINDOWS computer with at least 4GB memory and 32GB disk space free.
2. Read these [instructions and download the software](#). Install as directed.
3. Establish a VPN (Virtual Private Network) connection to the UMN's network. Links: [Overview](#), [Downloads & Guides](#)
After you have downloaded, unzipped and installed the correct VPN software for your computer (*you only need to do this step once*), you will need to start (run) the Cisco AnyConnect VPN Client each time you restart your computer to connect/reconnect to the UMN Network via the VPN. The Client connection/reconnection instructions are also included in the Overview, Downloads & Guides link (*see above*).
4. Map your computer to a UMN shared network drive (for access to class material and your L:\home\{your id} directory.) <https://it.umn.edu/connect-shared-drive-or-network-folder> The link for our class files is <\\files.umn.edu\cfans\labs>
