

Department of Forest Resources
University of Minnesota
FNRM 3131- GIS for Natural Resources – Spring 2018 (01/16/2018 – 5/4/2018)¹.

FNRM 3131 In-Person Class Times: 4:05-6:00 p.m., Mondays, in 110 Green Hall, and one of the following:

6:00 p.m. –	8:00 p.m.	Monday	35 Skok	Section 3
8:30 a.m. –	10:25 a.m.	Tuesday	35 Skok	Section 6
10:40 a.m. –	12:35 p.m.	Tuesday	35 Skok	Section 5
4:05 p.m. –	6:00 p.m.	Tuesday	35 Skok	Section 2
12:50 p.m. –	2:45 p.m.	Wednesday	35 Skok	Section 4

On-line Labs (come to any lab session; as needed) Section 7, 21
On-line Lecture (see Class [Website](#) for materials) Section 20

Instructors: Andrew C. Jenks Paul V. Bolstad
215 Green Hall, 651-387-9600 301H Green Hall, 612-624-9711
ajenks@umn.edu pbolstad@umn.edu

Office Hours: Mondays/Tuesdays 1-3:00 pm (Green 215) & [Google Hangouts, Wed 8pm-9pm](#)

Required Texts: *GIS Fundamentals: A First Textbook on Geographic Information Systems, Fifth Ed.*, Bolstad, Paul V., XanEdu Publishing, 2016. This book is on reserve in the Natural Resources Library 375 Hodson Hall and should be at the St. Paul Campus Bookstore, and at the website http://www.xanedu.com/higher-education/educators/custom-books-catalog/gis_fund_5e/ Readings from this book are required. There are also supplementary readings, which will be posted on the class web link, <http://giscourses.cfans.umn.edu/fnrm3131>.
You should do the readings before class meets; there is a quiz each week prior to start of each Tuesday lecture on the week's reading assignment.

Required Materials: You may download and print the exercises as PDFs from the class website, <http://giscourses.cfans.umn.edu/fnrm3131>. Throughout the labs sessions you will need to save/backup your work. To do this **you should purchase at a portable USB drive to use in the lab**. As GIS files can be quite large, you should get a 2 GB or larger drive; alternatively, you could use your UMN Google Drive.

Other Resources: The class website is <http://giscourses.cfans.umn.edu/fnrm3131>. This website has copies of this syllabus, and lab exercises. A related website, <http://paulbolstad.net/gisbook.html> has information on the textbook.

Student Responsibilities: You should attend the lectures (or access on-line lecture materials), do the readings, do assigned lab and homework problems submit them via Moodle; complete all quizzes and exams via Moodle. All material from lectures and readings may appear on the examinations.

If you need any assistive devices, services, or accommodations, due to a disability, please contact the Instructor.

1. Due to the University Holiday on January 15, 2018, we will begin our class on Monday, January 22, 2018; our lab sessions will also begin that week.

FNRM 3131 Schedule

NOTE: Readings are from the required textbook, [GIS Fundamentals; A First Textbook on Geographic Information Systems, Fifth Edition](#), by Paul Bolstad. All lab sections meet 2nd week

Week	Lecture Topic -- Monday (or On-line)	Labs/Homework – Skok 35 (or On-Line)	Required Readings	On-Line Exams
1 Jan 15	No Lecture or Lab due to University holiday	No Labs this week		
2 Jan 22	Course Introduction: Course mechanics Introduction to GIS, data models, data structures.	VL1: Intro. and practice with ArcGIS	Chapters 1 & 2	
3 Jan 29	Geodesy, datums coordinate systems, map projections	VL2: Projections	Chapter 3 & ESRI PDF, Understanding Map Projections (skim)	
4 Feb 5	Maps, data entry & editing, metadata, map transformations	VL3: Digitizing	Chapter 4	Exam 1 (Chapters 1,2,3)
5 Feb 12	GPS, begin aerial and satellite images	VL4: Map transformations; optional lab VL5: GPS (due March 30)	Chapters 5 & 6 up to 271	
6 Feb 19	Continue aerial and satellite images, digital data, data sources,	VL6: Census, NWI, DEM data, basic table operations	Chapter 6 to end and Chapter 7,	Exam 2 (Chapters 4,5,6)
7 Feb 26	Introduction to Tables & relational databases	VL7: Tables	Chapter 8, up to pg. 356	
8 Mar 5	Tables, normal forms	VL8: Table Import and Join Homework 1 due Friday	Chapter 8, pg. 357 to end	
9 Mar 12	No Classes - Spring Break	No Classes – Spring Break		
10 Mar 19	Basic spatial analyses	VL9: Buffering, overlay	Chapter 9	Exam 3 (Chapters 7 & 8)
11 Mar 26	Raster analysis	VL10: Raster Analysis Homework 2 due Friday	Chapter 10	
12 April 2	Terrain analysis, more spatial analysis	VL11: Terrain and more spatial analysis	Chapter 11	
13 April 9	Interpolation, prediction, core area delineation.	VL12: Interpolation	Chapter 12	Exam 4 (Chapters 9, 10, & 11)
14 April 16	Cartographic modeling, flowcharts	VL13: Grouse Habitat Modeling	Chapter 13	
15 April 23	More cartographic modeling, dynamic spatial models, standards, data quality	VL14: Cartographic Modeling	Chapter 14	
16 April 30	New developments/future trends	Continue Lab 14 Lab 14 due Fri., Friday May 4, 11:59 p.m.	Chapter 15	Exam 5 (comprehensive, weighted 1/3 towards Chapters 12-14)

Overview

FNRM 3131 is an introduction to geographical information systems, focusing on spatial data development and analysis in the science and management of natural resources. Many of our most pressing environmental problems involve “what” and “where,” for example, which coastal communities are in danger of sea-level rise, what intersections are most dangerous for traffic, where might an oil spill cause the most damage, or which power plants are causing the most acid rain? We have developed tools, called GIS, which help us address many of these problems, but there are dangers as well as opportunities here, as our conceptions and values as much determine our recommendations as do our technical capabilities. This course seeks to impart both a technical expertise and the basis to evaluate how our conceptual framework affects our conclusions. The course provides a technical understanding of the tools needed to solve these environmental problems, and how we may select the best tools to use in any given problem. Topics covered in this course include basic data models (data views), structures, data sources, data collection, data quality, geodesy and map projections, spatial and tabular data analyses, digital elevation data and terrain analyses, cartographic modeling, cartographic layout, and metadata, and accuracy assessment. Laboratory exercises provide practical experiences that complement the theory covered in lecture.

This course introduces the methods and models that have been developed to solve spatial problems. Computers have enabled sophisticated, affordable, and easy spatial analysis. For example, spatial technologies allow us to identify the specific communities and households downwind of any given coal-fired power plant, and estimate the specific levels of particulates, sulfates, mercury, and other noxious pollutants we expect to fall on each household. This allows a fuller, fairer measure of the costs in siting, expanding, or upgrading such plants. Water pollution, the distribution of resources, risk to natural disasters, crime analysis, and endangered species recovery are examples of other problems that have been addressed with spatial analyses.

Mechanics

You may complete the exercises in the campus computer labs or at home. You should read the lab in advance, and review/note new procedures or activities. Labs may require more than the two-hour period to complete. The Skok35 and Green 210a labs are open additional hours.

You may complete the exercises in the campus computer labs or at home. You should read the lab in advance, and review/note new procedures or activities. Labs may require more than the two-hour period to complete. The Skok35 and Green 210a labs are open additional hours.

Several options exist for access to the required ArcGIS software and data (*you choose the approach; you can use any of the options or switch between as needed throughout the class*).

1. Attend class lab session and use the provided computers, software and data; bring a USB jump drive.
2. Install the UMN provided VPN access and Citrix receiver software and then access the CFANS virtual desktop via a web browser. This will allow direct network computer access to ArcGIS without installing ArcGIS on your computer. (*this approach can be used with Windows or MacOS*). Data can be downloaded from the class website or from the shared/mapped network drive via VPN.
3. Install instructor provided 1-year copy of ArcGIS for use at home (*this approach is Windows ONLY, sorry not MacOS*) and download necessary data from the class website or shared/mapped network drive via VPN.

All Labs assignment will to be submitted via Moodle, <https://www.myu.umn.edu> . Log in to

www.myu.umn.edu, select “Academics” and then select the Moodle Course Link for FNRM 3131.

All Labs are due the Friday (11.55 p.m.) of the week **after** your scheduled Lab session. Late labs are docked by 1/3, and labs won't be accepted if they are more than 1 week late. Makeup labs are possible if the instructor has advance notice, so please anticipate conflicts, and contact the instructor. Labs are only accepted through the Moodle Course Site. Labs are submitted as .pdf files; please do not send .mdx, MSWord, or shapefiles. The final lab will have special requirements for submitting your work; this will be explained before the assignment.

Grading, Integrity, Ethics

Please note you may work together on labs, but you each must do every part of each lab, and turn in entirely your own work. That means each of you should perform every step indicated in the lab manual. Your grade is for individual effort; copied files/maps from other students will be construed as cheating, at a minimum you'll get zero for the lab, and you may automatically fail the course.

We will try to grade labs in a one-week period, for quick turnaround. However, this won't happen in all cases. The four on-line exams will each be worth 45 points; the FINAL will be worth 90. Each lab and homework will be worth 15 points, except the final lab, which is worth 30 points. **Grading will be on a straight scale, not on a curve.** If you all do well, you will all get an A. The scale is:

A	90 – 100				
B+	88 – 89.99	B	82 - 87.99	B-	80 – 81.99
C+	78 – 79.99	C	67 - 77.99	C-	65 – 66.99
D+	63 – 64.99	D	50 - 62.9		

Total required points in the class are: **549** (13 required labs = 210 points, 2 required homework = 30 points, 13 on-line quizzes = 39 points, 4 on-line exams = 180 points, Final = 90 points). In addition, there are several opportunities to obtain extra credit points.
